

COUNTRY CLASSIFICATION: OPPORTUNITIES, RISKS AND PARENTAL MEDIATION

COUNTRY FACTSHEET:

SLOVENIA

I. OPPORTUNITIES

Distribution of children according to different types of users

II. RISK & HARM

Distribution of children according to different types of risk & harm

III. MEDIATION

Distribution of children according to different types of parental mediation

IV. OVERALL CLASSIFICATION

SLOVENIA belongs to the “Unprotected networkers” group of countries.

This cluster stands out for having the highest percentage of young networkers and all-round explorers, while restricted learners are underrepresented compared to the average. The risk pattern of the countries in this cluster is close to the average, with a slightly higher number of children in the contact risks group. This cluster has the lowest percentage of children in the all-round mediation group (13%), while most belong to the passive mediation group (37%). Although Lithuania is geographically further away, Austria, Hungary and Slovenia form a special Central European cluster with children from groups that can be described as high on network opportunities and related risks while having parents with more passive mediation strategies.
